BASIC-ABSTRACT:

Process is characterised by preparing granules consisting of medicament, hydrophobic substance and high molecular substance insoluble in gastric juice; adding thereto ethyl cellulose and water-soluble high molecular substance, adding lubricant, colouring matter and flavouring, homogenising and compressing the mixture into tablets. As the hydrophobic substance, salt of higher fatty acid such as magnesium, calcium or aluminium salt of stearic acid, palmitic acid or myristic acid, calcium phosphate, calcium carbonate, talc, alumina gel or silicic anhydride can be used. As the high molecular substance insoluble in gastric juice, polyvinyl acetate, polyvinyl methyl ether, polyvinyl ethyl ether, polyethyl acrylate, polypropyl acrylate, polybutyl acrylate, polymethyl methacrylate or silicon resin which is soluble in organic solvent is pref. used. As the water-soluble high molecular substance, hydroxypropyl cellulose, hydroxypropyl methyl cellulose, methyl cellulose, carboxymethyl cellulose sodium salt, polyvinyl alcohol, polyvinyl pyrrolidone, gelatin, gum arabic or sodium alginate are pref. used.

ABSTRACTED-PUB-NO: US 4717713A

BASIC-ABSTRACT:

Controlled release orally administered liquid formulation comprises a drug containing 0.3 to 5 percent by wt. solution or suspension of zanthan gum, sodium alginate, gelatin, carrageenan or methylcellulose or their mixtures. Locust bean gum, salts, sugars, trisodium phosphate, calcium carbonate or Ca2HPO4.

USE/ADVANTAGE - the composition forms a gel matrix in the stomach which is in close contact with the stomach wall allowing gradual release of the active substance, being a liquid formulation, it is easier to swallow than solid forms.
